

Python Quick Reference

Example Code

Description	Example Code
Output text	<code>print("Some text")</code>
Text input	<code>name=input("What is your name? ")</code>
Number input	<code>num=int(input("Enter a number: "))</code>
Join text and a variable together	<code>print("Your score is",score)</code>
IF statement	<pre>if num == 4: print("Well done") else: print("Try again")</pre>
Generate a random number	<pre>import random num=random.randint(1,10)</pre>
For loop	<pre>for x in range(0,10): print("Python Rocks")</pre>
While loop	<pre>while password!="python": password=input("Enter your password: ")</pre>

Logical Operators

==	Is equal to
>	Is greater than
!=	Is not equal to
<	Is less than
>=	Is greater than or equal to
<=	Is less than or equal to
and	And
or	Or
